DETAILED ACTION

Allowable Subject Matter

Claims 2, 6-7, 10-15 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the limitations of an electric machine with cooling rings comprising *a non-laminated thermal conductor ring having a thermal conductivity that is greater than a thermal conductivity of the potting material disposed between the potted stator core end-turn and the housing for conducting heat from the stator core end-turn to the housing, wherein the thermal conductor ring is a non-metallic thermal conductor ring disposed between the potted stator core end-turn and the housing.*

The Examiner concurs with the applicant's remark that Jefferies does not teach *the thermal conductor ring is a non-metallic thermal conductor ring disposed between the potted stator core end-turn and the housing for the purpose of conducting heat from the stator core end-turn to the housing.* Also, EP000632566A1 and GB002233836A are the other two relevant refs teaching a thermal conductor ring disposed between the potted stator core end-turn and the housing for the purpose of conducting heat from the stator core end-turn to the housing; however, the thermal rings in these references are metallic material instead of non-metallic material.

Thus, comparing to the prior-art of the record, none of the prior art references of the record, either stand alone or in combination, has taught or suggest the above-mentioned features in combination with other limitations recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
